

PROJECT PROFILE: FOX RIDGE APARTMENTS POOL DECK

**Fox Ridge Apartments
Englewood, Colorado
2009**

Table Mountain Creative Concrete worked with the Construction Services Manager for Equity Residential Properties to repair the existing surface and apply a decorative overlay to the pool deck at the Fox Ridge Apartment Complex in Englewood, Colorado. The surface was scarified and ground to remove the multiple layers of existing concrete coatings. Once removed, approximately 630 square feet of concrete that had spalled needed to be repaired using Miracote Repair Mortar. Miracote Membrane A was then used as the primer over the entire 2,973 square foot deck to help lock down the existing surface and increase adhesion of the new overlay. Miracote Modified Polymer Coating (MPC) was sprayed and knocked down to achieve the attractive finish. The texture of the finish and a slip resistant additive to the sealer provided a safe surface for the pool deck.
